

Fire Protection for vital papers, records, computer media and personal valuables

- Superior level of protection against fire and theft
- High-capacity, mid-size and compact designs
- Designed to protect sensitive magnetic storage media
- 1-hour, 2-hour and 3-hour fire protection models
- Extensive range of styles and sizes to meet your budget
- Impact and burglary rated series available

Protecting valuable assets and business records is an essential part of your risk management program. Access to data is essential to restore and maintain operations after a fire or other natural disaster.

Off-site data storage involves costly fees and less convenient access to data during day-to-day operations. Diebold offers a complete line of Underwriters Laboratories Inc. (UL) rated fire and impact record and data safes to provide secure on-site storage alone or in conjunction with off-site storage.

Diebold Record and Data safes come in a vast range of styles and sizes to meet your budget. From our economical one-hour fire rated series to our Class 125 3-hour fire and impact rated models.

Interior components can be combined to provide a customized approach to handling virtually any records or media storage.

If you need protection, valuable information and peace of mind, let Diebold provide you the best protection money can buy.

DIEBOLD
We won't rest.

*The UL impact test calls for the safe to be heated to 1550° for 30 minutes (1638° for 45 minutes for a 2-hour fire-rated safe) then dropped onto concrete rubble from a height of 30 feet. Then it is inverted and re-heated for another 30 minutes (45 minutes for a 2-hour fire-rated safe). The safe must maintain its integrity throughout the test and protect all contents.
**Why is impact testing important? In many fires, roofs will cave in or the floor will collapse, destroying everything under them. In such an event, you'll want to know your safe is impact-rated.
