

DOOR OR ACCESS CONTROL/ CREDENTIAL MANAGEMENT

Do you always know who's coming and going? And, are they using traditional keys that actually make you feel *insecure* — and cost too much?

These are big questions

And they're big because much is at stake. Since these are major security issues, you'll likely want to turn them over to a proven, comprehensive security integrator.

Door or Access Control/ Credential Management — a Diebold suite

Diebold understands the importance of denying access. So we developed a full suite of credential management solutions, including both door and access control offerings. This suite provides security hardware, software, managed services and even financing options.

What do you want to achieve?

That's another big question. If you're re-thinking your company's access control processes, you may want to think about the following:

- *Am I ready to abandon traditional keys for a card-based system?*
- *How many access points would be involved?*
- *Would our access control system need to interface with a video system?*
- *Can I add monitoring and reporting capabilities?*
- *Could someone manage these services for me?*

INTEGRATED SERVICES®

Looking for that optimal solution

Many organizations place their entire access control system in Diebold's hands because they:

- Don't have the personnel needed to monitor doors, manage cards, etc.
- Want to enhance the security of their facilities and data.
- Would like to lower the overall cost of managing access.
- Desire the most-current security technology — and a path to technology refreshes.
- Need to integrate access control with other security functions (alarms, video surveillance, etc.)
- Know their time is better spent servicing customers and growing the business.

From manual to digital

How much time do you spend keeping track of keys? And how much time and money do you spend re-keying or purchasing new keys every time an employee leaves? Consider eliminating the daily use of traditional keys and locks altogether. You'll reduce key costs, be able to track key entry and exit activity, have the power to program which cards can open which doors and at what times, plus more.

Promise: no more re-keying costs

For every lock you replace with Diebold access control (or door control) technology, we promise to eliminate your key and re-keying costs for that door as long as it's protected by the system. Of course, as a best practice, we encourage property owners to maintain one set of master keys. In addition, you'll receive a complimentary Compliance Assessment to determine the compliance of your network.

Integrated services for security

The benefits of getting all your security systems (access control, alarm, surveillance, etc.) communicating on the same network are obvious. Even traditional security items such as locks are IP-enabled these days and located on the network. But, to do that, you need a security partner that's also a proven integrator.

Contact us today for a valuable, no-obligation consultation.

Be sure to ask about your free, no-obligation Compliance Assessment available upon acceptance of any one of our three suites.
