

# FIPS 201 COMPLIANCE & USAGE

Comprehensive FIPS 201 solutions leveraging compliant credentials for PACS & LACS

## Leveraging Compliant Credentials

Diebold Security is at the forefront of providing federal government agencies with the foundation needed to comply with the federal standards resulting from the issuance of HSPD-12. Implementation of FIPS 201 requires multiple systems to work together in real time. Diebold designs, implements and supports these systems, and provides the integration support to ensure seamless interaction.

- **Interoperable, complete FIPS 201 solutions**
- **Comprehensive identity management with automatic provisioning of PACS and LACS**
- **New compliant systems as well as migration implementation strategies for legacy systems**
- **Nationwide deployment and program management**

## Registration of Sponsored Applicants

Diebold supports the integration of Web-based work flow to facilitate the pre-enrollment process and furnishes complete enrollment stations. The stations include hardware and software that performs biographic and biometric data capture with full integration to the Identity Management System (IDMS) or Systems

Infrastructure Platform (SIP). Data capture can also be automatically used to provision single or multiple access control systems as well as Meta Directories for logical access (LACS) or for use with single sign-on applications.

### Identity Management System

Diebold understands the importance of a properly established IDMS and that it must securely pass the data to the Card Management System (CMS). Diebold works with the client's information technology (IT) department to facilitate the implementation of a sound solution.

### Card Management Systems

The Personal Identification Verification (PIV) credential must be securely managed for its entire life cycle. Diebold has comprehensive knowledge of the standards and can assist in maintaining credential compliance.

### Card Production Systems

Diebold can assist in the implementation of either a centralized card production system or a distributive printing solution. Diebold maintains depot-level service capabilities for card printers as well as dispatching trained field personnel for on-site maintenance and repair.

### Beyond Personal Identity Verification

Physical and logical access is becoming increasingly connected as companies seek one card to control access to both physical and intellectual property at all facilities in an organization. Diebold Security can support the integration of a FIPS 201-compliant solution, or a compliant physical and/or logical access control system (PACS/LACS), into an enterprise-wide Identity and Access Management (IAM) system for a comprehensive user provisioning and managed identity solution. Diebold can provide new systems or provide the best-possible integration of legacy systems. Auto-provisioning and database transfer of captured credential data can save valuable time while also assuring data transfer accuracy.

### Total Quality Assurance

Our Total Quality Assurance Team is your advocate, with the sole function of assuring we deliver a flawless installation that exceeds your expectations.

### Life-Cycle Support at Your Service 24/7/365

With redundant on-call systems and a wide array of warranty extension and preventive maintenance programs, we will always be there to help you protect the integrity of your systems. You'll have a single point of contact for your solution, from implementation to complete life cycle management.

### Consulting, Engineering and Training

We provide third-party review and engineering, systems design and integration and end-user training.

### Secure Facilities & Personnel

Our company, facilities and personnel comply with the strictest security standards required for federal and Department of Defense contracting.

### Nationwide Deployment and Program Management

Trained field personnel with the ability to deploy solutions on a national and global basis.

### Convenient Acquisition — GSA Advantage

Diebold is GSA SIN 132-62 Vendor Certified to provide, in addition to Pure Integration Services, HSPD-12 Complete End-to-End Integrated Turn-key Services and Products for complete FIPS 201-compliant solutions. Diebold is one of a limited number of companies certified to provide such solutions in compliance with FIPS-201 standards.
