

# Diebold Drive-Thru Kiosks *for Pneumatic Tube Systems*

Complete turnkey solutions for drive-thru services where line-of-site configuration is not possible.

## Turnkey Solutions for Drive-Thru Service

Diebold's Drive-Thru Kiosks for Pneumatic Tube Systems provide complete turnkey solutions for delivering drive-thru services where line-of-site configuration or canopies connected to the building are not possible. The kiosks' compact, ergonomic design delivers optimum customer convenience, operational efficiency and installation ease.

## A Dynamic Marketing Tool

Diebold kiosks can be painted to match virtually any color and can include your company name and graphics for eye-catching promotion. Backlit signage, standard on kiosks with a canopy, and graphic panels provided for the display of custom signage make these kiosks valuable marketing tools.

## Pharmacy Drive-Thru Services

Retail pharmacies have embraced drive-thru service as a means of improving customer satisfaction and operational efficiency. Diebold has developed pneumatic systems that ensure secure delivery of prescriptions and consultative services. Diebold's Drive-Thru Kiosks for Pneumatic Tube Systems increase site and store design flexibility by providing an efficient means of locating pneumatic tube system customer stations in an open parking lot, against an existing building wall or under a canopy.

When used for the delivery of pharmacy services, the kiosks can be combined with the Diebold Easy-aire® 10 or VAT 21 pneumatic tube systems. A unique tubing configuration within the kiosk ensures safe delivery of delicate pharmaceuticals in the smallest possible footprint and Two-Way CCTV for VATs allows clear two-way audio and video communication between customers and pharmacy personnel.

## Branch Financial Services

In the financial industry, securing a convenient location for the delivery of drive-up services for an in-store branch can be a challenge. Diebold's Drive-Thru Kiosks provide the option of locating the drive-up remotely. For financial applications, the kiosks can be combined with Diebold VAT 30, VAT 21 or VAT 23 pneumatic tube systems and Two-Way CCTV for VATs.

## Quality Construction and Design Flexibility

Kiosks are available in several models, each constructed of durable aluminum wrapped around a sturdy steel structure and bearing the UL 48 Standard for Safety for Electric Signs. The stand-alone Remote Island Kiosk with Canopy (4220) can be placed in the middle of a parking lot and is designed for use with overhead pneumatic tube systems. The Small Island Kiosk (4240) can be installed on a new or existing island with underground tubing or overhead tubing if an existing canopy is present. Three-sided Wall-Mount Kiosks have an aluminum back that is bolted to a wall and can accommodate underground or overhead tubing. An optional canopy can be added to the Small Island Kiosk or the taller Wall-Mount Kiosk (4245) when no existing canopy is present.

## No one knows more about drive-thru service delivery.

Diebold professionals can help you analyze your facility, traffic patterns and business objectives to identify the best available drive-thru location and assist you in selecting the appropriate kiosk and pneumatic tube system to meet your needs. Complete project management and installation services are also available to ensure efficient implementation of your system with minimal disruption to your business. But that's not all. A service contract with Diebold's nationwide service organization will give you the assurance of knowing your system will operate smoothly for years to come.
