

NOT KNOWING IS NOT AN OPTION

Security, Compliance,
Log Monitoring
and Management

The Challenge of Compliance

Healthcare organizations are required to comply with HIPAA, HITECH and a host of other industry regulations. These requirements have forced organizations to re-examine their data collection, archiving and retention practices. Simply assuming controls are working is not satisfactory. There is a high expectation for accuracy and the potential for increasingly stringent penalties for non-compliance.

Not Adequate: Reactive, Manual Processes

IT staffs face daily challenges as they try to find, alert, report and respond to potential threats to privacy and security in the voluminous logs created by various applications and systems. Across the industry, IT auditing and monitoring functions are not being performed consistently and are largely still manual processes for most organizations. Implementing an automated system that is simple, sustainable and scalable will provide a proactive approach to your security management program and ensure readiness for regulatory compliance. Automatically classifying and managing data logs elevates efforts to a new level and provides a comprehensive view and audit trail.

INNOVATION DELIVERED®

Diebold's Security, Compliance, Log Monitoring and Management solution is a comprehensive 24x7x365 remote monitoring and management system. It automates audit log collection, analysis and archival, transforming a limited, reactive program into a robust, proactive and compliant program. Reporting and alerting communications can be automated or accessed on demand.

ADVANTAGES

Collect – Accumulates network, host, server, application and event logs (via syslog and other protocols) from a wide variety of network systems, such as routers, switches and security devices

Review – Assesses pre-selected reports and management dashboards or initiates ad-hoc audits or queries

Ensure – Ascertains compliance with regulatory reporting and auditing requirements

Retain – Meets mandated retention requirements through automated, reliable and tamper-resistant log storage

Diebold Healthcare Solutions

- Information Security and Compliance Solutions
- Patient Self-Service Solutions
