

# IN-DEPTH DEFENSE FOR AN ENTIRE ENTERPRISE

Security Information and  
Event Management (SIEM)  
and 24/7 Log Monitoring

## Information Security Awareness

Myriad regulations require an active auditing and monitoring program. HIPAA/HITECH, PCI DSS, Sarbanes-Oxley (SOX), FTC Red Flags Rule and other various federal and state regulations are just some of the compliance drivers affecting healthcare organizations. Security information event management (SIEM) solutions provide organizations the ability to meet information system and user activity review requirements. Diebold's solution harnesses the mass amounts of event data created throughout the enterprise, providing analysis and correlation to turn information into actionable intelligence.

## Collect, Correlate and Report

By collecting, correlating and reporting security events from firewalls, IDS/IPS (intrusion detection system/intrusion protection system) devices, servers and other data sources across the network, Diebold's SIEM mitigates risk, protects valuable assets and assists healthcare entities by shifting the burden of implementing and managing the solution to a trusted partner. The solution provides around-the-clock monitoring by certified security analysts, establishes well-defined management processes and brings our extensive knowledge of the current threat environment.

**DIEBOLD**

INNOVATION DELIVERED®

## Better and Faster

Healthcare organizations have a business priority to more accurately and rapidly analyze event information. Making better, faster decisions for your organization requires obtaining better information faster. Healthcare organizations can benefit from a SIEM to collect information from diverse sources to include database transactions and the content of applications. Correlating data with information that provides additional context allows the SIEM to utilize more advanced analytics, providing more accurate information at a faster rate.

Diebold's SIEM solution is a comprehensive 24x7x365 remote monitoring and management tool that reviews in real-time the current security status, analyzes trends and will alert you immediately if you have a data breach on your network -- malicious or accidental, from an external threat or an insider.

## ADVANTAGES

**Correlate** – Creates a unified vision of the activity from across the enterprise

**Protect** – Provides 360 day detection and protection against both internal and external threats

**Detect** – Offers real-time incident notification through the evaluation of events and associated risk

**Respond** – Analyze incidents against hundreds of rules to respond quickly to data breaches

**Investigate** – Obtains the security intelligence you need through log data retention and complex reporting capabilities

## Diebold Healthcare Solutions

- Information Security and Compliance Solutions
- Patient Self-Service Solutions
- Physical and Electronic Security Systems
