

SAFEGUARDING AND MAINTAINING NETWORK SECURITY

Vulnerability Scanning
and Management

Effective Programs are Difficult to Establish and Maintain

Many organizations make investments in protective devices such as firewalls and IDS/IPS (intrusion detection system/intrusion protection system) solutions without achieving the full benefit. Competing priorities, stretched budgets and staffing shortages are prominent reasons healthcare organizations struggle with their network security programs. Yet installing these protective devices is not enough.

Proactive Threat Detection

An effective network security program requires proactive management of these devices to ensure their defined security measures are working as planned. As new applications, patches and network additions emerge, regular scans of the information technology (IT) infrastructure are necessary to assess any vulnerable openings and identify weaknesses.

DIEBOLD

INNOVATION DELIVERED®

Diebold's Vulnerability Scanning and Management Service schedules internal and external scans to automatically check network devices, servers, Web applications, databases and other assets for vulnerabilities, and provides alerts for remediation. Scan frequency is based on the needs of your organization and the threat of exposure.

The Vulnerability Scanning and Management Service is a proactive auditing and monitoring program that allows you to effectively manage the health and risk of your systems and protect the critical data they contain. Supported by our certified security analysts, the Vulnerability Scanning and Management Service implements well-defined processes and helps you realize the full value of your information security system.

ADVANTAGES

Verify – Enhances effectiveness and certifies continuity of network security

Minimize – Proactively reduces exposure and safeguards your information systems

Respond – Provides disciplined methodology for remediation

Ensure – Assists compliance with regulatory reporting and auditing requirements

Diebold Healthcare Solutions

- Information Security and Compliance Solutions
- Patient Self- Service Solutions
- Physical and Electronic Security Systems
